INTRODUCTION

The Cassette fan coil units **TopLine** serie (7 sizes), **TopLine ECM** serie (5 sizes) and **TopLine ECM 7-8** (2 sizes), are the result of an extended technical and design development aimed at achieving the highest level in terms of performance, silent operation and control possibility.

The full TopLine range has an innovative and beautiful design, high control flexibility and extremely easy maintenance, all this achieving the highest level in terms of performance suited to all dimension environments.

The air diffuser has an highly attractive aesthetical appearance, very innovative, and is also able to offer the best air distribution performance thanks to long computer studies and laboratory tests.

The standard colour is RAL 9003, other colours available on request.

All the models allow the best outcome in terms of quietness and of price/performance ratio.

Every unit can be supplied with 1 coil (2 pipe system) and a possible electric heater or with 2 coils (4 pipe system).

The Cassette is fitted with inlets for fresh air to be mixed with return air inside the unit.

The float switch centrifugal pump is particularly silent, with 650 mm of maximum head.

In addition to temperature and speed standard controls, automatic speed selection is also available. More than one unit can be connected to a single control.

All the units can be supplied in **MB** version. This version includes a wide range of controls, including the infra-red remote control, which allows managing one single unit or several units by using the Modbus RTU - RS 485 communication protocol. The units can be connected to the most common automatic building management systems.

With the TopLine ECM 7-8 MB version serie it is possible to control at the same time the (motorized) outlet louvers with the remote-control or with the T-MB wall control.

The outlet louvers position themselves automatically according to the selected operation (summer-winter) and can be managed with the swing mode, that guarantees a complete air distribution in the environment.

ECM version

The **TopLine ECM** and **TopLine ECM 7-8** series use an innovative brushless synchronous permanent magnet

electric motor controlled by an inverter board that is directly installed on the unit.

The air flow can be varied continuously with a 1-10 V signal from controls or by independent controllers (programmable controllers with a 1-10 V output).

The extreme efficiency, also at a low speed, makes possible a great reduction in electric consumption (more than 75% less in comparison to a traditional motor) with absorption values, under normal operating conditions, that are no greater than a 10 Watt for **TopLine ECM** serie and than 20 Watt for **TopLine ECM 7-8** serie.

The brushless motor is characterised by a constant synchronous speed, independently of the applied load, that depends only on the motor power supply frequency, which is modulated by the inverter.

It consumes less because:

- the motor always works at its point of maximum efficiency
- in the brushless motor, the rotor's permanent magnets generate the magnetising power autonomously
- the motor always operates at the synchronous speed, as a result there are no induced currents that reduce efficiency.

The main advantages are:

- large reduction in energy consumption, thanks to an optimal response to the thermal load of the environment during every moment of the day
- operating silence at all rotation speeds
- ability to operate at any rotation speed.

MAIN COMPONENTS

600 x 600 version

800 x 800 version

Air diffuser

Intake grids, frame and adjustable air distribution louvers on each side, made from ABS.

- RSNA version: white ABS, RAL 9003.
- RSNB version: with intake grid, frame and louvers, choice of one colour only.
- RSNC version: with intake grid and louvers, choice of one colour, plus white ABS frame RAL 9003.
- RSND version: with louvers, choice of one colour, while the grid and frame are made from ABS, RAL 9003.
- MD-600 / MD-800 version: metal diffuser painted in RAL 9003 white colour, with 600x600 / 800x800 dimension, to perfectly fit into the false ceiling standard modules without overlapping parts.

Inner casing

It is made of galvanized steel with internal thermal insulation with polyolefin (PO) foam (class M1) and external anti-condensate lining.

Control panel

Made of an external box with the control electronic board with an easily accessible terminal board.

Fan assembly

The fan assembly, which is mounted on anti-vibrating supports, is extremely silent.

The radial fan has been designed to optimise performance, using wing profile blades with a shape that reduces turbulence, increasing efficiency and reducing noise.

The motor is single phase 230 V / 50 Hz supply, class B insulation and integrated Klaxon thermal contact for motor protection.

The units are supplied with 3 standard speeds connected and it is possible to change them on site if necessary.

Coil

Made of copper tubes with bonded aluminium fins for maximum transfer contact.

1, 2 or 3 row coil for 2 pipe models and 2+1 row coil for 4 pipe models (the heating row is on the inside part of the coil).

For 4 pipe systems two versions are available: the TL 0.4T, TL 1.4T, TL 2.4T, TL 3.4T, TL 4.4T, TL 5.4T, TL 6.4T serie supply an higher heating emission; and the TL 2.6T, TL 3.6T, TL 5.6T, TL 6.6T serie supply an higher cooling emission. The coil is not suitable for use in corrosive atmosphere or in environments where aluminium may be subject to corrosion.

Condensate collection tray

High density ABS polystyrene foam condensate tray, shaped in order to optimize the air diffusion.

Fire retardant rating B1 to DIN 4102.

Filter

Synthetic washable filter, easily removable.

Condensate pump

Float switch centrifugal pump with 650 mm of maximum head, integral to the unit and wired to the control panel on the outside of the casing.

Valve set

Two or three way valves for ON/OFF operation, with pipe mounting kit and lockshields.

TECHNICAL FEATURES

2 pipe system

The following standard rating conditions are used:

COOLING

Entering air temperature: + 27 °C d.b. + 19 °C w.b.

Water temperature: +7 °C E.W.T. +12 °C L.W.T.

HEATING

Entering air temperature: + 20 °C

Water temperature: +45 °C E.W.T. +40 °C L.W.T.

WATER SIDE PRESSURE DROP

2 pipe system

Pressure drop for mean water temperature of 10 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)						
	20	30	40	50	60	70	80
K correction factor	0,94	0,90	0,86	0,82	0,78	0,74	0,70

4 pipe system

Pressure drop for mean water temperature of 10 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)						
	20	30	40	50	60	70	80
K correction factor	0,94	0,90	0,86	0,82	0,78	0,74	0,70

Pressure drop for mean water temperature of 60 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)			
	40	50	70	80
K correction factor	1,12	1,06	0,94	0,88

OPERATING LIMITS

Description		UoM	Value
Water flow	Highest working pressure	bars	10
		kPa	1000
	Lowest water inlet temperature	°C	+6
	Highest water inlet temperature	°C	+80
Power supply		V/Hz	230/50

For maximum installation height, see p. 17.

Metal air inlet grid MD 600 / MD 800

(RS receiver, Code 9066338, for metal diffuser for MB units)
Not suitable with electronic electrostatic filter.

Model	Code
MD-600	9079420
MD-800	9079417

AIR THROW

The air throw indicated in the tables must only be considered the maximum value, as it may change significantly in relation to the dimensions of the room in which the appliance is installed and the positioning of the furniture in the room.

The useful throw L refers to the distance between the unit and the point where the air speed is 0.2 m/sec; if the louver has a gradient of 30° (recommended in cooling mode), the so-called "coanda" effect will occur,

illustrated in the first figure, while at a gradient of 45° (recommended in heating mode), there will be a downwards throw, as illustrated in the second figure.

Note: on heating it must be paid attention to rooms where the floor temperature is particularly low (for example less than 5 °C). In this situation the floor can cool the lower layer of air to a level that stops the uniform diffusion of the hot air coming from the unit, decreasing the throw figures shown in the table.

With adjustable air diffusion louvers at 30°

TL CONTROLS

All the units of the **TopLine TL** range can be supplied with a wide range of controls that allows managing one single unit or several units (with the use of speed switches or with the use of the power units).

The options range from the basic **WM-3V**, for 3 speed control only, to the highly sophisticated electronic room thermostats **WM-T**, **WM-TQR** and **T2T**, that regulate the room temperature and are suitable when the user wants to set the fan speed.

The most evolved versions **WM-AU**, **T-MB** and **WM-503-AC-EC**, allow both the manual and the automatic speed switch.

Note: all the controls are described in detail in the "Fan Coil Control Range literature".

230 V 50-60 Hz

(*) To be used with UPM-AU or UP-AU only

(**) To be used with UP-503-AC-EC only

Control systems

See from p. 50 for:

- the MB electronic board (to be fitted on the MB version)
- the MB controls and units

TL-E VERSION

The 2 pipe model Cassette units are available with electric heater.

The electric heater is controlled in place of the hot water valve and not as integration to it.

The electric heaters are hermetically sealed and supplied inside the coil pipes and therefore can be only factory mounted.

The electric resistances of the units are for single phase 230V supply.

The Cassette fan coil unit includes no. 2 safety thermostats which intervene in case of internal over- heating, opening an auxiliary power relay (included in the electrical panel) which stops the power supply to the electric heaters.

Note: the cooling emission of the units is 95% of the emission in the tables of page p. 8.

Constructional features of the electric heater

Model		TL 1.2T	TL 2.2T	TL 3.2T	TL 4.2T	TL 5.2T	TL 6.2T
Emission	W	1500	2500		3000		
Single-phase rated operating voltage	Vac/Ph/Hz	230/1/50					
Connecting wires	n x mm²	3 x 1,5	3 x 2,5				
Maximum current absorbed	A	7,0	11,0		13,5		
Advised fuse ⁽¹⁾	A	8	12		16		
Max. ambient temperature ⁽²⁾	°C	25					

- (1) for the overheat protection; gG type
(2) with electric heater in heating mode

TL-E CONTROLS

WM-T control

230V 50-60Hz

WM-AU control (*)

230V 50-60Hz

WM-TQR control

230V 50-60Hz

T-MB control (*)

230 V 50-60 Hz

(*) To be used with UPM-AU or UP-AU only

AIR DIFFUSER

Version

White ABS, RAL 9003.

RSNA

Version

In ABS painted in one color to choose.

RSNB

Version

Louvers and intake grid painted choice of one colour, frame in white ABS, RAL 9003.

RSNC

Version

Louvers painted in one color to choose, frame in white ABS, RAL 9003.

RSND

MAIN COMPONENTS

600 x 600 version

800 x 800 version

Air diffuser

Intake grids, frame and adjustable air distribution louvers on each side, made from ABS.

- **RSNA** version: white ABS, RAL 9003.
- **RSNB** version: with intake grid, frame and louvers, choice of one colour only.
- **RSNC** version: with intake grid and louvers, choice of one colour, plus white ABS frame RAL 9003.
- **RSND** version: with louvers, choice of one colour, while the grid and frame are made from ABS, RAL 9003.
- **MD-600 / MD-800** version: metal diffuser painted in RAL 9003 white colour, with 600x600 / 800x800 dimension, to perfectly fit into the false ceiling standard modules without overlapping parts.

Inner casing

It is made of galvanized steel with internal thermal insulation with polyolefin (PO) foam (class M1) and external anti-condensate lining.

Control panel

- **TL-ECM** version

It consists of the pump control circuit board and the inverter circuit board.

- **TL-ECM-MB** version

It consists of the MB electronic board (that integrates pump control) and the inverter board.

Fan assembly

The fan assembly, which is mounted on anti-vibrating supports, is extremely silent.

The radial fan has been designed to optimise performance, using wing profile blades with a shape that reduces turbulence, increasing efficiency and reducing noise.

The fans are connected to a three phase permanent magnet brushless electronic motor that is controlled with reconstructed current according to a BLAC sinusoidal wave.

The inverter board that controls the motor operation is powered by 230 Volt, single-phase and, with a switching system, it generates a three-phase frequency modulated, wave form power supply.

The power supply of the unit is single phase 230-240Vac 50/60Hz.

Coil

Made of copper tubes with bonded aluminium fins for maximum transfer contact.

2 or 3 row coil for 2 pipe models and 2+1 row coil for 4 pipe models (the heating row is on the inside part of the coil).

For 4 pipe systems two versions are available: the TL 1.4T and TL 4.4T serie supply an higher heating emission; and the TL 2.6T, TL 3.6T, TL 5.6T serie supply an higher cooling emission.

The heat exchanger is not suitable for use in corrosive atmosphere or in environments where aluminium may be subject to corrosion.

Condensate collection tray

High density ABS polystyrene foam condensate tray, shaped in order to optimize the air diffusion.

Fire retardant rating B1 to DIN 4102.

Filter

Synthetic washable filter, easily removable.

Condensate pump

Float switch centrifugal pump with 650 mm of maximum head, integral to the unit and wired to the control panel on the outside of the casing.

Valve set

Two or three way valves for ON/OFF operation, with pipe mounting kit and lockshields.

TECHNICAL FEATURES

2 pipe system

The following standard rating conditions are used:

COOLING

Entering air temperature: + 27 °C d.b. + 19 °C w.b.

Water temperature: +7 °C E.W.T. +12 °C L.W.T.

HEATING

Entering air temperature: + 20 °C

Water temperature: +45 °C E.W.T. +40 °C L.W.T.

WATER SIDE PRESSURE DROP

2 pipe system

Pressure drop for mean water temperature of 10 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)						
	20	30	40	50	60	70	80
K correction factor	0,94	0,90	0,86	0,82	0,78	0,74	0,70

4 pipe system

Pressure drop for mean water temperature of 10 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)						
	20	30	40	50	60	70	80
K correction factor	0,94	0,90	0,86	0,82	0,78	0,74	0,70

Pressure drop for mean water temperature of 60 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)			
	40	50	70	80
K correction factor	1,12	1,06	0,94	0,88

OPERATING LIMITS

Description		UoM	Value
Water flow	Highest working pressure	bars	10
		kPa	1000
	Lowest water inlet temperature	°C	+6
	Highest water inlet temperature	°C	+80
Power supply	Single-phase rated operating voltage	V/Hz	230/50

For maximum installation height, see p. 33.

DIMENSION AND WEIGHT

TL-ECM 1.2T-1.4T / TL-ECM 2.2T-2.6T / TL-ECM 3.2T-3.6T (600 x 600 version)

Packed unit

Metal air inlet grid MD 600 / MD 800

(RS receiver, Code 9066338, for metal diffuser for MB units)
Not suitable with electronic electrostatic filter.

Model	Code
MD-600	9079420
MD-800	9079417

AIR THROW

The air throw indicated in the tables must only be considered the maximum value, as it may change significantly in relation to the dimensions of the room in which the appliance is installed and the positioning of the furniture in the room.

The useful throw L refers to the distance between the unit and the point where the air speed is 0.2 m/sec; if the louver has a gradient of 30° (recommended in cooling mode), the so-called "coanda" effect will occur,

illustrated in the first figure, while at a gradient of 45° (recommended in heating mode), there will be a downwards throw, as illustrated in the second figure.

Note: on heating it must be paid attention to rooms where the floor temperature is particularly low (for example less than 5°C). In this situation the floor can cool the lower layer of air to a level that stops the uniform diffusion of the hot air coming from the unit, decreasing the throw figures shown in the table.

With adjustable air diffusion louvers at 30°

Vdc = Inverter power

CONTROLS FOR TL-ECM UNITS

TL-ECM version

For this Cassette configuration, the 1-10 Vdc signal, which controls the inverter, must be supplied by a controller with the following signal specifications:

Fan drive signal

- Fan OFF = 0 Vdc
- Fan ON > 1 Vdc
- Max. speed = 10 Vdc

Blac-ECM Inverter board

- 0÷10 Vdc Circuit Input Impedance Value = 68kOhm

Power supply

230Vac 1Ph 50-60Hz

Controls

All the units of the **TopLine TL-ECM** range can be supplied with a wide range of controls that allows managing one single unit or several units (with the use of the power units).

The room temperature can be controlled through electronic room thermostats, with different solutions according to every ambient conditions.

The **WM-AU**, **T-MB**, **WM-503-AC-EC** and **WM-S-ECM** electronic thermostats control the room temperature precisely and are suitable when the user wants to set the fan speed.

Note: all the controls are described in detail in the "Fan Coil Control Range literature".

WM-AU control (*)

230V 50-60Hz

T-MB control (*)

230 V 50-60 Hz

WM-S-ECM control

230 V 50 Hz

WM-503-AC-EC control (**)

230 V 50 Hz

(*) To be used with UPM-AU or UP-AU only

(**) To be used with UP-503-AC-EC only

Control systems

See from p. 50 for:

- the MB electronic board (to be fitted on the MB version)
- the MB controls and units

TL-ECM-E VERSION

The 2 pipe model Cassette units are available with electric heater.

The electric heater is controlled in place of the hot water valve and not as integration to it.

The electric heaters are hermetically sealed and supplied inside the coil pipes and therefore can be only factory mounted.

The electric resistances of the units are for single phase 230V supply.

The Cassette fan coil unit includes no. 2 safety thermostats which intervene in case of internal over-heating, opening an auxiliary power relay (included in the electrical panel) which stops the power supply to the electric heaters.

Note: the cooling emission of the units is 95% of the emission in the tables of page p. 24.

Constructional features of the electric heater

Model		TL-ECM 1.2T	TL-ECM 2.2T	TL-ECM 3.2T	TL-ECM 4.2T	TL-ECM 5.2T
Emission	W	1500	2500		3000	
Single-phase rated operating voltage	Vac/Ph/Hz	230/1/50				
Connecting wires	n x mm ²	3 x 1,5	3 x 2,5			
Maximum current absorbed	A	7,0	11,0		13,5	
Advised fuse ⁽¹⁾	A	8	12		16	
Max. ambient temperature ⁽²⁾	°C	25				

- (1) for the overheat protection; gG type
(2) with electric heater in heating mode

TL-ECM-E CONTROLS

WM-AU control (*)

T-MB control (*)

(*) To be used with UPM-AU or UP-AU only

MAIN COMPONENTS

RSNA Version

RSNB Version

Air diffuser

Intake grids, frame and adjustable air distribution louvers on each side, made of ABS. In the **TL-ECM-MB** version the outlet louvers are adjustable with infra-red remote control or with T-MB wall control (for the **TL-ECM** version manually only).

The intake and air distribution grids are available with both, the G0 filter and the **ePM₁ 55% - F7 filter**.

- **RSNA** version: white ABS, RAL 9003.
- **RSNB** version: in ABS one single color to choose.

Inner casing

It is made of galvanized steel with internal thermal insulation with polyolefin (PO) foam (class M1) and external anti-condensate lining.

Control panel

- **TL-ECM / TL-ECM-E** version

It consists of the pump control circuit board and the inverter circuit board.

- **TL-ECM-MB / TL-ECM-MB-E** version

It consists of the MB electronic board (that integrates pump control) and the inverter board.

The diffusion louvers are adjustable with the infra-red remote control or with T-MB wall control.

Fan assembly

The fan assembly, which is mounted on anti-vibrating supports, is extremely silent.

The radial fan has been designed to optimise performance, using wing profile blades with a shape that reduces turbulence, increasing efficiency and reducing noise.

The fans are connected to a three phase permanent magnet brushless electronic motor that is controlled with reconstructed current according to a BLAC sinusoidal wave.

The inverter board that controls the motor operation is powered by 230 Volt, single-phase and, with a switching system, it generates a three-phase frequency modulated, wave form power supply.

The electric power supply required for the machine is therefore single-phase with voltage of 230 - 240 V and frequency of 50 - 60 Hz.

Coil

Made of copper tubes with bonded aluminium fins for maximum transfer contact.

3 row coil for 2 pipe models and 2,5 + 1/2 row coil for 4 pipe models (the heating row is on the inside part of the coil).

The heat exchanger is not suitable for use in corrosive atmosphere or in environments where aluminium may be subject to corrosion.

Condensate collection tray

High density polystyrene foam condensate tray, shaped in order to optimize the air diffusion.

Fire retardant rating B1 to DIN 4102.

Filter

Easy access to the filter that is available in both versions, in the G0 (synthetic regenerable washable) and in the ePM₁ 55% - F7 one (to change at the end of its life-cycle).

Condensate pump

Float switch centrifugal pump with 650 mm of maximum head, integral to the unit and wired to the control panel on the outside of the casing.

Valve set

Two or three way valves for ON/OFF operation, with pipe mounting kit and ball valves.

TECHNICAL FEATURES

2 pipe system

The following standard rating conditions are used:

COOLING

Entering air temperature: + 27 °C d.b. + 19 °C w.b.

Water temperature: +7 °C E.W.T. +12 °C L.W.T.

HEATING

Entering air temperature: + 20 °C

Water temperature: +45 °C E.W.T. +40 °C L.W.T.

(1) The sound pressure levels are 9 dB (A) lower than the sound power levels, apply to the reverberant field of a 100 m³ room and a reverberation time of 0.5 sec.

4 pipe system

The following standard rating conditions are used:

COOLING

Entering air temperature: + 27 °C d.b. + 19 °C w.b.

Water temperature: +7 °C E.W.T. +12 °C L.W.T.

HEATING

Entering air temperature: + 20 °C

Water temperature: +65 °C E.W.T. +55 °C L.W.T.

WATER SIDE PRESSURE DROP

2 pipe system

Pressure drop for mean water temperature of 10 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)						
	20	30	40	50	60	70	80
K correction factor	0,94	0,90	0,86	0,82	0,78	0,74	0,70

4 pipe system

Pressure drop for mean water temperature of 10 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)						
	20	30	40	50	60	70	80
K correction factor	0,94	0,90	0,86	0,82	0,78	0,74	0,70

Pressure drop for mean water temperature of 60 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)			
	40	50	70	80
K correction factor	1,12	1,06	0,94	0,88

OPERATING LIMITS

Description		UoM	Value
Water flow	Highest working pressure	bars	10
		kPa	1000
	Lowest water inlet temperature	°C	+6
	Highest water inlet temperature mod. 7.2T-8.2T	°C	+65
	Highest water inlet temperature mod. 7.6T-8.6T	°C	+80
Power supply	Single-phase rated operating voltage	V/Hz	230/50-60

For maximum installation height, see p. 46.

Filter

ePM₁ 55% - F7 filter

Micro-pleated synthetic filter dimension 578x578x24 mm.

The filtering media is made of (PP+PS) polystyrene and polypropilene. The very big micro-pleated filtering

surface increases the emissions and reduces the pressure drops.

Air flow Qv (m³/h)	700	1000	1300	1600	1900	2200
Efficiency	70%	70%	65%	65%	55%	55%

DIMENSION AND WEIGHT

Without packaging	kg			42	

Weight/Model		7.2T	7.6T	8.2T	8.6T
With packaging	kg			9,4	
Without packaging	kg			7,5	

AIR THROW

The air throw indicated in the tables must only be considered the maximum value, as it may change significantly in relation to the dimensions of the room in which the appliance is installed and the positioning of the furniture in the room.

The useful throw L refers to the distance between the unit and the point where the air speed is 0.2 m/sec; if the louver has a gradient of 40° (recommended in cooling mode), the so-called "coanda" effect will occur,

illustrated in the first figure, while at a gradient of 60° (recommended in heating mode), there will be a downwards throw, as illustrated in the second figure.

Note: on heating it must be paid attention to rooms where the floor temperature is particularly low (for example less than 5 °C). In this situation the floor can cool the lower layer of air to a level that stops the uniform diffusion of the hot air coming from the unit, decreasing the throw figures shown in the table.

With adjustable air diffusion louvers at 40°

Model		TL-ECM 7.2T-7.6T			TL-ECM 8.2T-8.6T		
Vdc		1	5	10	1	5	10

Vdc = Inverter power

CONTROLS FOR TL-ECM UNITS

TL-ECM version

For this cassette configuration, the 1-10 Vdc signal, which controls the inverter, must be supplied by a controller with the following signal specifications:

Fan drive signal

- Fan OFF = 0 Vdc
- Fan ON > 1 Vdc
- Max. speed = 10 Vdc

Blac-ECM Inverter board

- 0÷10 Vdc Circuit Input Impedance Value = 96 kOhm

Power supply

230Vac 1Ph 50-60Hz

Controls

All the units of the **TopLine ECM 7-8** range can be supplied with a wide range of controls that allows managing one single unit or several units (with the use of the power units).

The room temperature can be controlled through electronic room thermostats, with different solutions according to every ambient conditions.

The **WM-AU**, **T-MB**, **WM-503-AC-EC** and **WM-S-ECM** electronic thermostats control the room temperature precisely and are suitable when the user wants to set the fan speed.

Note: all the controls are described in detail in the "Fan Coil Control Range literature".

WM-AU control (*)

230V 50-60Hz

T-MB control (*)

230 V 50-60 Hz

WM-503-AC-EC control (**)

230 V 50 Hz

WM-S-ECM control

230 V 50 Hz

(*) To be used with UPM-AU or UP-AU only

(**) To be used with UP-503-AC-EC only

Control systems

See from p. 50 for:

- the MB electronic board (to be fitted on the MB version)
- the MB controls and units

NTC PROBE WITH BLUETOOTH INTERFACE

ID	Code
WM-NTC	9079885

The WM-NTC probe to be used only with the MB board for TopLine TL-ECM-MB 7-8 unit, is a control for concealed installation (box interaxle spacing 60 mm) for room temperature control.

This control with fitted NTC probe lets the prevention from stratification problems.

Technical specifications

- On/off switch for the fan coil unit
- Manual and automatic 3 speed switch
- Internal probe for room temperature detection
- Receiver for infra-red remote control
- Integrated Bluetooth® Module

With the dip-switches it is possible to select the following operating functions:

- Room temperature cut-out thermostat only
- ON/OFF switch
- ON/OFF and speed change switches
- Operating mode with receiver for infra-red remote control for RT03 infra-red remote control
- With Bluetooth data® receiving and transmission

The WM-NTC probe can be used as stand-alone or master/slave.

TL-ECM-E VERSION

The 2 pipe model Cassette units are available with electric heater.

The electric heater is controlled in place of the hot water valve and not as integration to it.

The electric heaters are hermetically sealed and supplied inside the coil pipes and therefore can be only factory mounted.

The electric heaters of the unit can be for 230Vac 1Ph 50-60Hz or 400Vac 3Ph 50-60Hz supply.

The Cassette fan coil unit includes no. 2 safety thermostats which intervene in case of internal over-heating, opening an auxiliary power relay (included in the electrical panel) which stops the power supply to the electric heaters.

Note: the cooling emission of the units is 95% of the emission in the tables of page p. 39.

Model		TL-ECM 7.2T	TL-ECM 7.6T	TL-ECM 8.2T	TL-ECM 8.6T
Emission	W	3000			
Single-phase rated operating voltage	Vac/Ph/Hz	230/1/50			
Rated three phase connection	Vac/Ph/Hz	400/3/50			
Connecting wires	n x mm ²	3 x 2,5			
Maximum single-phase current absorbed	A	13,5			
Maximum three-phase current absorbed	A	4,5			
Single-phase adviced fuse ⁽¹⁾	A	16			
Three-phase adviced fuse ⁽¹⁾	A	6			
Max. ambient temperature ⁽²⁾	°C	25			

- (1) for the overheat protection; gG type

CONTROLS

MB electronic board

The MB electronic board, to be mounted on the **TL-MB**, **TL-ECM-MB** and **TL-ECM-MB-E** versions, is set to carry out different functions and adjustment modes, in order to meet the installation requirements.

The Dip Switches on the board have to be set to carry out different functions:

- 2/4 pipe unit
- electronic room thermostat or automatic fan speed modulation for fan control (ON-OFF)
- electronic room thermostat for valve control (ON-OFF) (the fan keeps working)
- simultaneous thermostatic control of the valves and fan
- fan operation control depending on the coil temperature (cut-out T3 probe fitted), which can be activated only in heating mode or heating and cooling mode
- automatic switch of the operating mode by means of T2 water probe (optional) applied on the 2 pipe system
- seasonal switch by means of remote contact
- ON/OFF of the fan coil by means of the remote contact (window or clock contact)
- electric heater control

By activating the cut-out T3 probe function, the fan is stopped in winter when the coil temperature is lower than 32 °C and started when the temperature reaches 36 °C. In summer mode, the fan stops when inside the coil exceeds 22 °C and starts when it drops below 18 °C.

The following connections are located on the power board:

- receiver for infra-red remote control
- T-MB wall control
- serial connection to manage several fan coil units in Master/Slave configuration or to create a supervisory network.

Topline / Topline ECM

Topline ECM 7-8

MB controls and units

All the units **TopLine TL**, **TopLine ECM** and **TopLine ECM 7-8** can be supplied in **MB** version. This version includes a wide range of controls, including the infra-red remote control, which allows managing one single unit or several units by using the Modbus RTU - RS 485 communication protocol.

Units can be managed according to the Master/Slave logic (up to 20 units) or by supervisory components. The system includes a single MB power board and a range of technical devices to be used with:

- the **T-MB** wall control and the **RT03 infra-red remote control** remote control, to manage single units;
- the **PSM-DI** multifunctional panel, the **NET** supervisory system, the **Touch screen multifunction control panel T-DI** and the **Web gateway** Web gateway for **Cloud**, to manage one single unit or several units.

Note: all the controls are described in detail in the "Fan Coil Control Range literature".

T-MB control

230 V 50-60 Hz

RT03 remote control

PC and NET screenshot

230V 50-60Hz

T-DI Touch screen multifunction control panel

The T-DI multifunction control panel lets supervise and control more units with MB or SIOS boards; the panel is equipped with a 7 inches touch screen display and a serie of graphical pages that allows an easy reading of the data sent by the fan coils and the management of up to 60 units (max. 60 units: SIOS + MB).

With the multifunction control panel T-DI it is also possible to control the units remotely with the specific Cloud App for Android and iOS.

The Cloud application is simple to use and lets have complete control of all the connected units.

T-DI Touch screen multifunction control panel

Web gateway for Cloud

With the Web gateway for "Cloud" it is possible to control at a distance up to 60 units, equipped with MB or SIOS boards (max. 60 units: SIOS + MB), with the specific APP for Android and iOS.

The "Cloud" APP is simple to use and lets have complete control of all the connected units.

Web gateway for Cloud

PSM-DI multifunction control panel

With the PSM-DI multifunction control panel it is possible to manage up to 60 units that are equipped with MB electronic board or SIOS (max. 60 units: SIOS + MB).

The PSM-DI multifunction control panel supervises via Bus network all the connected units.

The remote connection (stand-alone) is not possible.

PSM-DI multifunction control panel

230 V 50-60 Hz

FRESH AIR AND CAP ACCESSORY

Fresh air

To be used with TL 0-1-2-3 models only.

The TopLine cassette is fitted with inlets for fresh air to be mixed with return air inside the unit (except TopLine TL-ECM).

The fresh air flow is limited to 20% of the total fan coil air flow at medium speed and 100 m³/h for each treated air inlet.

The units feature fresh air inlets on three corners (no inlets on the fourth corner because of the condensate pump inside the unit).

The fresh air inlets are designed for the insertion of standard 110x55 mm rectangular ducts or for the circular ducts fresh air connection CAP below illustrated.

The fresh air is conveyed into the radial fan and mixed to the return air.

Note: the fresh air must be filtered.

Fresh air connection

Not suitable for MCT models with outer casing.

Model	ID	Code
0-1-2-3	CAP	6078005

The air duct is connected quickly and easily. After removing the blank and the insulation inside the unit, the mounting plate is rolled back and the air duct with its V-shaped section must be pushed into the unit. The duct is then fixed to the mounting plate.

ACCESSORIES

Air distribution connection

Not suitable for MCT models with outer casing.

Model	ID	Code
0-1-2-3	CDA 600	9079232
4-5-6-7-8	CDA 800	9079233

On Cassette fan coils two air outlets are provided on the side of the unit for connection to separate supply air outlets. The total air flow does not change.

The air distribution connection diameters are:

Model	0-1-2-3	4-5-6-7-8
Ø fitting	mm	mm
	150	180

The air flow at high speed depending on the air duct pressure drop is shown in the tables below.

Note: all air ducts must be insulated in order to avoid condensation.

Air distribution connection pressure drop

0-1-2-3 models with outlets used n. = 1

A Pressure drop	C 0.2T-0.4T-1.2T-1.4T	E 3.2T-3.4T-3.6T
B Air flow	D 2.2T-2.4T-2.6T	

4-5-6 models with outlets used n. = 1

A Pressure drop	C 4.2T-4.4T	E 6.2T-6.4T-6.6T
B Air flow	D 5.2T-5.4T-5.6T	

7-8 models with outlets used n. = 1

A Pressure drop	C 7.2T-7.6T
B Flow rate	D 8.2T-8.6T

0-1-2-3 models with outlets used n. = 2

A Pressure drop	C 0.2T-0.4T-1.2T-1.4T	E 3.2T-3.4T-3.6T
B Air flow	D 2.2T-2.4T-2.6T	

4-5-6 models with outlets used n. = 2

A Pressure drop	C 4.2T-4.4T	E 6.2T-6.4T-6.6T
B Air flow	D 5.2T-5.4T-5.6T	

Fresh air kit

Not suitable for MCT models with outer casing.

Model	ID	Code
0-1-2-3	PRT 600	9079230
4-5-6	PRT 800	9079231
7-8	PRT 900	9079235

This is used to introduce fresh air into the environment directly through the diffuser.

The kit includes a flow separator to be fitted inside the cassette, and a circular fitting for connection to the flexible system ducting.

The flow of air is sent directly to just one of the outlet louvers, without passing through the coil. The air flow of fresh air introduced into the environment depends on the inlet static pressure.

The fresh air kit diameters are:

Model		0-1-2-3	4-5-6-7-8
Ø fitting	mm	150	180

Correlation between flow-rate / Static pressure

Models 0-1-2-3

Flow rate	m³/h	80	120	160	200	240
Static pressure	Pa	3	8	15	25	36

Models 4-5-6-7-8

Flow rate	m³/h	160	200	300	400	500
Static pressure	Pa	3	8	15	25	36

Units with remote electric board

Factory mounted on standard units **TopLine TL** without MB electronic board.

It can not be fitted on ECM versions.

Model	ID	Code
0-1-2-3-4-5-6	RUS	on request

On request the **TopLine TL** cassettes are available with electric control panel reachable from below and with the electric board that can be placed in a remote position.

In this case the units are supplied with an electronic connecting control panel, fitted to the bottom side on the 4 smallest sizes and to the lateral side on the 3 biggest sizes.

The electronic control panel is connected to the fan motor, to the condensate pump and to the condensate level control.

A 6 m wire is also supplied with integral plug-in connections to connect the unit with the remote electric board that can be installed in a suitable and comfortable position, where the power and system connections can be made easily.

This feature is not available for units with electric heater or infrared remote control.

3 ways ON-OFF valves with actuator with interception valve

Valve set with 3 ways ON-OFF valves and with thermoelectric actuator; the set includes connection pipes.

2 way valve

For technical data, operation limits and valves pressure drop, see p. 60

Valves technical data and operation limits

Description	UoM	Value
Max. working pressure	bars	16
Max. ambient temperature	°C	50
Max. water temperature	°C	110
Power supply	V-Hz	230-50/60
Rating	VA	2,5
Protection		IP 44
Travel time	min	ca. 3
Max. glycol content of water	%	50

Note: The maximum pressure drop accross the fully open valve should not exceed 25 kPa for cooling operation and 15 kPa for heating operation.

Valves pressure drop

Balance valve with actuator

TopLine ECM 7-8 excluded.

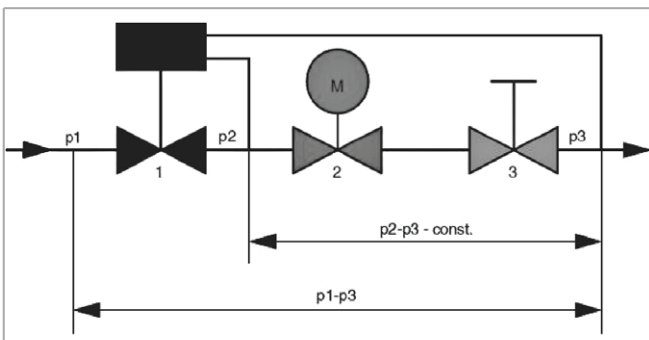

Balancing valves independent from the system pressure.

- The balancing valve and a combined 2 way valve allow the regulation of the water flow value autonomously, regardless of the system pressure, and the control of the flow by using an ON/OFF electro-thermal actuator.
- The balancing valve allows you to balance the hydraulic system by supplying the required water flow, for each fan-coil, and to maintain it even under partial load conditions.
- A graduated ring nut placed under the valve allows you to set the flow rate value and also allows direct reading of the set value.

Valve operation logic

- "p1" the valve inlet pressure.
- "p3" the outlet pressure.
- "p2" the diaphragm activation pressure, which allows differential pressure "p2" – "p3" to be maintained at a constant value, in order to guarantee the water to flow at the set value.

The minimum differential pressure "p1" – "p3", required to guarantee the correct value of the set water flow rate, is indicated in the diagrams on page p. 62.

This is an essential factor to size the system pressure drop and pump pressure head.

The flow rate is kept at a constant value only if the valve pressure drop is higher than the indicated value.

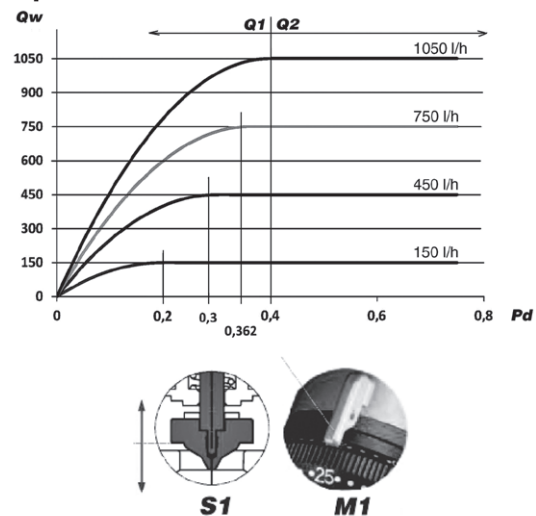

Minimum operating differential pressure

The minimum differential pressure and the balancing valve pressure drop must be considered to size the system pumps.

The flow rate remains stable only if the water side pressure drop will be more than the one shown in the page p. 62 diagrams.

The following diagram shows an example of the flow rate trend according to the pressure drop and calibration required.

Example DN 15 Model

Qw = Water flow rate

Pd = Min. differential pressure "p1" - "p3" (bar)

Q1 = Area with inconstant water flow

Q2 = Area with constant water flow

S1 = Position of the adjustment valve plunger

M1 = Position of the knob

The valve upstream-downstream minimum differential pressure ("p1" – "p3"), which depends on the valve calibration value, must be exceeded to access the constant flow rate field.

E.g., when sizing the system pump, in which the DN 15 valves will be installed and in which 450 l/h are constantly required for each device, consider a useful pressure of 0.3 bar (to compensate the pressure drop of the valve) for each balancing valve. Therefore, the pressure drop values produced by the system balancing valves must be summed and the pump must be sized to produce a pressure equal to or greater than the value obtained previously.

Benefits

- Reduced dimensions.
- Easy installation on 2 or 4 pipe devices.
- Pre-regulation of the nominal value set even with installed actuator.
- Easy display of the nominal value set. Nominal values are indicated in 10 l/h without any conversion.
- Guarantee of constant flow rate set even with partial loads.
- Pre-regulation can be blocked and leaded with the locking ring.

Technical specifications

DN model	Flow rate range (l/h)	Kvs
DN 15	150 - 1050	1,8
DN 20	180 - 1300	2,5

Operation limits of the balancing valves

- Maximum operating temperature: 120 °C
- Highest working pressure: 16 bar
- Maximum % of water/glycol mixture: 50%
- Minimum operating temperature: -10 °C
- Maximum differential pressure: 4 bar

Balancing valves for main coil

2 way valve for main coil and assembly kit.

The valve is supplied equipped with 230 Volt electro-thermal actuator for the ON/OFF control.

MCT casing

Model	ID	Code
0-1-2-3	MCT 600	9079240
4-5-6	MCT 800	9079250
7-8	MCT 900	9079886

The MCT version has been designed for all environments where false ceilings are not featured or cannot be constructed.

The casing fits perfectly to the air intake and outlet diffuser, maintaining the appealing design that defines the TopLine series.

The water fittings can be turned to point upwards.

The MCT series includes 9 models, with an installation height of up to 5 m, thanks to the highly flexible adjustment of the air distribution louvers.

All the technical specifications described on the previous pages remain the same, while keeping in mind that:

- the MCT series features one coil only (2 pipe systems)
- there is no possibility of fresh air intake
- there is no possibility of additional electric heater

The MCT version features a special casing, in COOL GREY 1C colour, delivered in separate packaging; this must only be fitted after having installed the TopLine unit and completed the water and electrical connections.

Warning: the electrical and water connections must enter the unit from above and must not interfere with the casing.

* maximum pressure difference for valve to close

The valve fittings allow the water pipes to be connected from above.

ELECTRONIC ELECTROSTATIC FILTER

TopLine ECM 7-8 excluded.

The fan coil Cassette TopLine, **TL** and **TL-ECM** range (except for TopLine ECM 7-8), can be equipped with the innovative plate type electrostatic filter, combining air treatment and purifying in a single product. The electronic filter is patented and certified according to Standard UNI 11254 and UNI EN ISO 16890 Class A+ (Eurovent).

Operating principle of the electrostatic filter

When the polluted air goes through the mechanical pre-filter the particles $> 50 \mu\text{m}$ are eliminated (powder, insects, etc).

Then the smallest particles ($50 \div 0.01 \mu\text{m}$) are exposed to an intensive ionizing field and are polarized (B - B Phase).

The charged particles passing through the second filter section, are pushed back by the anode and attracted to the collection surfaces by a strong, induced magnetic field (C - C Phase).

The air which leaves the unit is free from polluting particles.

Dimensions

Models 0-1-2-3 (600x600)

Models 4-5-6 (800x800)

Indoor air quality (IAQ)

The expression Indoor Air Quality (IAQ) covers all the procedures and methodologies used to improve the quality of the air we breathe in the places where we live and work, from all points of view, from temperature to cleanliness, to relative humidity, etc. (UNI EN 16798-1 / 3).

Thanks to its new patented electronic filter, the electrostatic filter totally eliminates the pollutants present in the air, including tobacco smoke, dust (PM10, PM2.5, PM1), fibres, microbiological substances such as bacteria, fungi, etc., which are harmful to human health (source: WHO 2009).

Purifying the air means not only greater well-being, but also energy saving, as the fresh air changes are significantly reduced (indeed it is enough to supply just the quantity of air required to reduce the gaseous pollutants).

Moreover, according to the new EN UNI 16798, the recirculated air of the unit can be considered as fresh air, because it is filtered with the same efficiency (ePMx), to be added to the minimum requirements (0,5 ls/m² or 4 lt/pers. in accordance with WHO).

The positioning of the electronic filter allows simple and effective maintenance and, as it is easy to wash, its working life is practically unlimited.

The modularity of the filter components and their ease of mounting make the system extremely competitive in terms of cost and energy consumption (A+ class) if compared with other types of filters present on the market.

In spring and autumn, if air conditioning/heating is not required, the appliance acts simply as an air purifier.

Standards and legislation

The ambient condition is acceptable when:

- Microclimatic parameters are normal
- 80% of people are satisfied by the quality of air
- Specific internal contaminants are not in harmful concentrations

"Guidelines for the protection and promotion of health in confined areas O.G. No. 276 dated 27 Nov 01 ordinary supplement no. 252"

The method for obtaining the air quality required in confined areas and thus succeeding in ensuring that the contaminants present are in concentrations less than those considered dangerous to health are:

- **Prescriptive approach:** ventilation of the internal area using only properly filtered fresh air (SUPx), in the quantity and quality needed to dilute the internal contaminants in order to reach the required maximum acceptable concentration values (see WHO limits).
- **Performant approach:** ventilation with fresh air and recirculated air from the same area, both properly filtered, in the quantity and quality needed to dilute the internal contaminants in order to reach the required maximum acceptable concentration values (see WHO limits).

The quantity and quality of recirculated air and fresh air to supply is better specified in the prescriptive approach of UNI EN 16798-1 (annex A national legislative) and UNI EN 16798-3.

The flow rate derives from a binomial equation that joins a proportion per surface (qp.s) (L/sec/m²), that can

change according to the internal emission of the contaminants (3 classes: very low polluting, low polluting, non low polluting) and a proportion per person (qp.p) (L/sec/pers.).

$$\text{Tot. flow rate} = (\text{qp.s} \times \text{m}^2) + (\text{qp.p} \times \text{N}^{\circ}\text{pers.})$$

The table here below shows partially an example of the values:

Prescriptive Method

Ambients Category	UNI EN 16798-1 (annex A national legislative)											
	Flow rate per person (l/sec/pers.)			Flow rate per surface (l/sec/m ²) Very low polluting			Flow rate per surface (l/sec/m ²) Low polluting			Flow rate per surface (l/sec/m ²) Non low polluting

Fresh air flow rates according to the performant approach

UNI EN 16798-1 and UNI EN 16798-3 Standards

The example reproduced at the bottom of the page shows how, with adequate air filtering, it is possible to decrease considerably the quantity of fresh air to be brought into the environment (up to 3-4 times less):

the thermal energy dissipated due to ventilation is in fact in direct proportion to the number of air changes, as indicated in the following equation:

$$Q_v = \Delta T \cdot (R / 3600) \cdot D \cdot C \cdot \text{Vol.}$$

Q_v = Thermal energy lost for ventilation - Watt

ΔT = Indoor-Outdoor difference (T) - °C

R = A.C.H.

D = Air density - Kg/m³

C = Specific air heat - J/Kg-°C

Vol = Room size - m³

Note: www.tecnicabontempi.it for the simplified "IAQ software" performance rating

Main components

The filtering element consists of two sections: the first consists of electrodes and insulating elements, forming a self-supporting ionising frame, while the second consists of special light aluminium fins (collector).

All electrical connections are made during production: the installation of the Cassette TopLine Cassette fan coil unit incorporating the electronic filter is therefore similar to that of a normal unit: the only difference is the installation height, for which the filter dimensions must be taken into account (30 mm).

The electronic electrostatic filters can not be used with the electric heater.

Active plate type electronic filter

The filtering element consists of two sections: the first consists of electrodes and insulating elements, forming a self-supporting ionising frame, while the second consists of special light aluminium fins (collector).

The two sections are installed above the return air grille to make the extraction and maintenance of the filter easier.

Accessibility to sections to be cleaned is ensured by easy-open plastic closures.

The collector can be cleaned by washing with water and ordinary detergents or steam jets (please consult the maintenance manual for further details).

PCB (electronic board)

Controls and regulates all functions of the electrostatic filter.

It is appropriately protected against any operating defects of the electrostatic filter.

It supplies a constant voltage to the electrodes when the mains supply voltage varies ($\pm 15\%$).

The supply transformer is constructed with its primary and secondary coils physically separated and wound onto separate cores.

The energy consumption of the filter group is 25 W (to which the electrical consumption of the Cassette TopLine must be added).

Control and regulation commands

Units with electronic electrostatic filter can be controlled and regulated by the series of IAQ controls that are already provided for SEC fan coils units.
